What Zaura does

Zaura provides the tools to follow a family of automated gold trading strategies. You choose which strategies to follow, and your own deployment trades them on your MetaTrader 5 (MT5) account automatically, opening, adjusting and closing trades as each strategy does. You don't need to watch the markets or place trades yourself.

Every member gets their own **personal deployment**, linked to their own MT5 account, with their own configuration applied: which strategies to follow, how large each trade should be, and whether to take buy trades, sell trades or both. Your settings apply only to your account.

Your account

Trades are placed on your own MT5 account with your broker. Your funds stay in that account.

Your configuration

You choose the strategies, the trade size for each one, and the sides to trade.

Your control

Turn trading on or off at any time from the app. Your settings are kept while it is off.

What you need

- An email address, or a Google account.
- A **Premier Markets MT5 hedging account**. Accounts with other brokers, and netting accounts, are not supported for now.
- Your MT5 account number and main (trading) password.

No Premier Markets account yet? Zaura support on Telegram helps you set one up.

Your MT5 login

Zaura places trades on your account using the same login details you use for the MT5 app. Enter them in **Trading Settings → Broker Connection**.

FIELD	WHAT TO ENTER
MT5 Server	Choose the Premier Markets server from the list. Your account must be a **hedging** account; if you're not sure, ask Premier Markets.
MT5 Account Number	The number Premier Markets gave your trading account. It is not your email address or a username.
MT5 Password	Your **main (trading) password**. The investor (read-only) password cannot place trades, so it won't work.

> **How your password is used.** Zaura and its trade-execution provider store your MT5 password and use it only to place the trades of the strategies you follow on that account. You're asked to agree to this when you save it. If you later change your MT5 password, enter the new one in Trading Settings and save, or your deployment stops trading. You can keep using the MT5 app as normal; your deployment's trades appear there like any other trade.

Getting started

1 Create your account

Go to app.zauratechnologies.com and choose **Create Account**. Sign up with your email address and a password, or choose **Continue with Google**.

2 Verify your email

If you signed up with email, open the verification link we send you, then sign in. Can't find it? Check your spam folder or choose **Resend Email**.

3 Link your MT5 account

Open **Trading Settings** and fill in **Broker Connection** with your Premier Markets server, account number and password (see *Your MT5 login* on the previous page). Agree to how your password is used, then choose **Save Changes**.

4 Choose your strategies and trade sizes

In the same page, switch on the strategies you want to follow and set the trade size for each. You can do this while you wait for approval.

5 Wait for approval

The Zaura team reviews every account before your deployment starts trading. Your status shows **Awaiting approval** until then, and the trading switch stays locked.

6 Turn trading on

Once you're approved, switch **Trading Status** on and save. Your status moves from *Setting up* or *Connecting* to **Trading**, usually within a few minutes. From then on, your deployment trades the strategies you follow on your account.

> **Need help?** Zaura support on Telegram, t.me/+MFsKcPtBRKMwYWU0, helps with every step, including your Premier Markets account.

Your account status

Shown under the trading switch in Trading Settings.

STATUS	WHAT IT MEANS
Not linked	Link your Premier Markets MT5 account to start.
Broker not supported	The linked account isn't a Premier Markets account.
Awaiting approval	The Zaura team hasn't approved your account yet.
Trading off / Linked	You're approved, but trading is off. Turn it on to start trading.
Setting up / Connecting	Your deployment is starting. This takes a few minutes.
Trading	Your deployment is trading the strategies you follow.
Needs attention	We couldn't connect. The message says what to check.
Suspended	Your account is suspended. Contact the Zaura team.

Your settings at a glance

Everything is set in **Trading Settings**. Changes take effect when you choose **Save Changes**.

Trading Status

The master on/off switch. Off stops your deployment opening new trades and keeps your settings. Trades already open are closed when the strategy closes them.

Strategies

Follow one or more Zaura strategies. Each one you follow has its own trade size and buy and sell switches. Following several can mean several positions are open at once.

Trade size

For each strategy, either **% of balance** (0.1% to 5% risk per trade, sized from your balance and the trade's stop loss) or **fixed lots** (the same size every trade, at least 0.01 lots). For fixed lots, the app shows recommended sizes.

Buy and sell

For each strategy, choose whether to take its buy trades, its sell trades, or both.

Daily Drawdown Limit

On unless you turn it off, at 25% unless you change it (5% to 35%). If your equity falls by that much in a day (midnight to midnight UTC), no new trades are opened until midnight UTC. Open trades are not closed.

Trading Hours

Choose the sessions in which new trades are opened: Asia, London and New York (08:00 to 17:00 local time, Monday to Friday), plus up to two custom periods. All three are on unless you change them.

Daily Profit Target

Off unless you turn it on (0.5% to 50% of the day's starting balance). Once your closed trades reach it, no new trades are opened until midnight UTC.

Stop-Loss Limit

Off unless you turn it on (1 to 10). Once that many trades in a row close at their stop loss in a day, no new trades are opened until midnight UTC. A trade that closes any other way starts the count again.

> **Start small.** We recommend risking 1–2% per trade, or a modest fixed lot size, and following one strategy to begin with. The first time you change a trade size, you are asked to read and accept a risk disclaimer.

The app also has **Live Signals** (each strategy's latest trades), **Account Balance** (your balance, equity and open positions) and **Strategies** (each strategy's profile, track record, lot size calculator, and analytics: its live trades replayed on your own account size and settings).

Full details are in the app

Once you're signed in, open **User Guide** in the menu. It explains every setting in depth, how to size your trades, how to use the lot size calculator, and how fixed lot sizes follow a strategy's partial profit-taking.

Important information

High risk. Trading gold CFDs and other leveraged products carries a high level of risk and can result in rapid losses because of leverage. You can lose part or all of the money in your trading account. Only trade with money you can afford to lose, and make sure you understand how these products work.

Past performance. Past performance is not a reliable indicator of future results. Strategy figures shown in the app are based on each strategy's published signals. They are not the results of a live trading account and are shown before spreads, commission, swap and slippage.

Your results will differ. Your deployment's trades can differ from a strategy's own trades, for example in price, timing, spreads and the size closed at each target. Partial closes are rounded down to 0.01 lots, so small trade sizes may not follow a strategy's profit-taking exactly.

Daily limits do not cap your loss. The daily drawdown limit, profit target and stop-loss limit stop new trades being opened; they do not close trades that are already open, which can keep moving against you. If you turn the drawdown limit off, new trades keep being opened on a losing day until you turn trading off.

Your settings, your responsibility. Higher risk settings and larger lot sizes can significantly increase drawdown. Any changes you make outside the recommended settings are entirely at your own discretion and responsibility. If you are unsure how to size your trades, seek guidance before changing them.

No advice. Zaura provides automated trading tools. It does not provide investment advice or personal recommendations, and nothing in this guide or the app is a recommendation to follow any strategy.

Your broker. Your trading account, your funds and the trades placed on it are held with Premier Markets under your agreement with them. Zaura does not hold your money.

Service availability. Your deployment depends on your broker, the trade-execution provider and internet services. An interruption at any of them can delay or prevent a trade from being opened or closed.

Approval. Every account is reviewed before its deployment starts trading. Zaura may decline or suspend an account.

Zaura, its developers, partners and affiliates accept no liability for losses resulting from trading, modified risk settings, incorrect position sizing or excessive leverage.
